

Selection

The experiment, step by step

data	1. Public execution blocks toward the target list	656 blocks
	2. Delivered with a usable calibration, processed uniformly	484 blocks
	3. Retained after the pre-registered hold-out (77 withheld)	404 blocks
windows	4. Spectral windows in the science sample	1655 windows
	5. Fine-channel, drift-resolving (Class A)	403 windows
	6. Threshold crossings at the stellar position, $T_{\star} \geq 5$	75 crossings
candidate tests	7. Rank-first against all 512 spatial controls	13 windows
	8. Still rank-first under radius correction	10 windows
	9. Without an astrophysical attribution (3.2 by chance)	4 events
	10. Independently confirmed: recurrence, second epoch, visibilities	0 candidates
