

Selection

The experiment, step by step

data selection	1. Public execution blocks toward the target list	656 blocks
	2. Delivered with a usable calibration, processed uniformly	484 blocks
	3. Retained after the pre-registered hold-out (77 withheld)	404 blocks
	4. Spectral windows in the science sample	1655 windows
automated candidate generation	5. Fine-channel, drift-resolving (Class A)	403 windows
	6. Threshold crossings at the stellar position, $T_{\star} \geq 5$	56 crossings
	7. Rank-first against all 512 spatial controls	12 windows
	8. Still rank-first under radius correction	11 windows
	9. Localised at the star in the visibilities (stage 2)	6 windows
physical validation	10. Without an astrophysical attribution	2 events
	11. Independently confirmed by recurrence or second epoch	0 confirmed
