

Threshold crossings at the stellar position

$T_{\star} \geq 5$ in a searched window

56

Unattributed

no catalogued transition within $\pm 50 \text{ km s}^{-1}$
in the star's own frame

37

Tested for recurrence

stellar-frame cell, matched drift,
439 covering repeat blocks

36

Confirmed

present again at the predicted cell

0

The rank is a prioritisation note, not a step

1 of the 37 unattributed crossings outranks all 512 control positions and was examined first.
