(a) recovered blind, at the star, in every block
other crossings (39 of the 52 plotted)
β Pic CO(1−0), 5 blocks
β Pic CO(2−1), 5 blocks
HD 48370 foreground CO(2−1)
β Pic, 2 unattributed crossings
(nearest masked line CS 5→4,
> 3700 km s^{-1} away)
ring = star
trigger $T = 5$
ring wins: 6 of 512 controls
above the star
maximum over the 512
control positions
statistic at the star, $T_\star$
(b) the strongest crossings are the ones on a line
β Pic, 2 windows 3765 to 3870 km s^{-1}
from the nearest masked transition
±50 km s^{-1} mask
|offset| from the nearest masked
transition, stellar frame (km s^{-1})
statistic at the star, $T_\star$
